HURRICANE BEULAH, SEPTEMBER 5-29, 1967

(Preliminary Report)

Killer hurricane Beulah ripped through the Caribbean Sea, across the Yucatan Peninsula to the Gulf of Mexico, before finally bringing her wrath to southern Texas. In her devastating wake Beulah left at least 41 people dead, thousands homeless, and more than \$1 billion in property and crop damage. Texas was hardest hit. Floods resulting from the storm's torrential rains, aided initially by strong winds caused most of the damage.

Beulah began harmlessly as a weak tropical depression, east of the Windward Islands, on September 5th. Early on the 7th reports from the islands and reconnaissance aircraft indicated tropical storm development about 35 miles west of Martinique (14.5° North, 61.5° West). Beulah's gale force winds battered the islands from St. Lucia to Guadeloupe. Moving into the warm Caribbean waters, the storm intensified to hurricane strength by 2200 GMT on the 8th, some 330 miles southeast of San Juan, Puerto Rico. Winds, at this time, were 75 knots near the center with gales extending out 75 miles in all directions. Beulah passed within 70 miles of Puerto Rico lashing the southern coast with gale force winds and rough surf. Maximum winds at this time - 0400 GMT on the 10th - were about 115 knots with gales extending 125 miles in all directions. Maximum winds increased to 120 knots before Beulah brushed the southern coast of the Dominican Republic early on the 11th. Moving westward across the Barahona Peninsula Beulah's circulation was disrupted by rugged mountainous terrain to the north; consequently winds dropped to 65 knots as the storm moved back into the Caribbean late in the day. The next two days saw Beulah degenerate to tropical storm intensity as it dipped south of Jamaica.

Beulah caused considerable damage and some good among the Caribbean Islands. Thirteen victims were counted on the island of Martinique. Homes were destroyed, flood waters poured three feet deep in Fort de France and banana crops were flattened on the French Island. At St. Vincent, gales and torrential rains caused two deaths along with much crop destruction. St. Lucia also experienced Beulah's destructive forces. With Puerto Rico, particularly the southern coastal regions, in the throes of its most severe drought, Beulah's torrential rains were a blessing. Pastures on the south coast were completely burned and the cattle industry was depending on emergency supplies. A drought-caused disease was killing off the coffee trees. Puerto Rico therefore, fared the best with only gale force winds and much needed rains. One person was killed in a storm-related accident.

For the fourth year in the last five Haiti and the Dominican Republic reeled under the destructive force of a hurricane. Two lives were lost in the Dominican Republic with high winds and torrential rains wreaking havoc among the sugar cane and coffee crops.

Beulah degenerated to tropical storm strength at 0400 GMT on the 13th some 150 miles south of Kingston, Jamaica. The storm moved westward and slowly reorganized. Beulah regained hurricane strength on the 14th about 425 miles south southeast of Havana, Cuba. The hurricane plowed through the northwest Caribbean on a northwesterly course that would take it over the Yucatan Peninsula. Generating winds up to 125 miles an hour Beulah moved over the Mexican resort island of Cozumel and across the Yucatan Peninsula. Overland the storm rapidly diminished and, when it entered the Gulf of Mexico, just west of Progreso, winds had dropped to minimum hurricane intensity.

Beulah left a wide path of destruction in northern Yucatan. Roads were flooded, power and communications cut out, rural lines toppled and crops were ruined throughout the jungled peninsula. Eleven people were killed.

Once over the warm waters of the Gulf of Mexico Beulah regained the momentum and intensity she had lost on land. She continued west northwestward and by 1000 GMT on the 18th was located about 420 miles southeast of Brownsville, Texas; maximum winds at this time were 90 knots. The intense hurricane turned to a northwesterly course and headed for the south Texas coast. At 1600 GMT on the 19th, Beulah, its center 175 miles southeast of Brownsville, was generating 105 knot winds close to the center and gale force winds out to 250 miles to the north. Reconnaissance reports indicated that the central pressure had dropped to 923 millibars (27.26 inches). This was the lowest reported pressure during the life of the storm.

Great hurricane Beulah moved inland just east of Brownsville, near the Texas-Mexico border, about 1200 GMT on the 20th. The pressure at Brownsville fell to 950.7 millibars (28.07 inches) at 1400 GMT and winds gusted to at least 95 knots. The SHIRLEY LYKES, in Port Brownsville during the passage, reports winds of 118 knots. Tides from Port Isabel to Rockport ran 7 to 10 feet above normal.

Beulah moved north northwestward during the day spreading hurricane force winds as far north as Corpus Christi; Corpus Christi had a peak gust of 75 knot and recorded 15 1/2 hours of gale force winds. The night of the 21st, Beulah, which had stalled in the Alice, Texas area, dropped below hurricane force. Continuing to weaken, the storm turned southwestward and moved across the border, south of Laredo, early on the 22nd. Later in the day Beulah broke up in the mountains near Monterrey, Mexico.

Although considerable damage resulted from strong winds and high tides, the ~~major portion~~ major portion of the destruction was due to torrential rains and resultant flooding. Floods occurred over southern Texas and adjacent areas of Mexico. All streams from the Guadalupe River to the Rio Grande were flooded with many reaching record heights.

Torrential rains, which triggered the floods, totaled near 30 inches in some areas. Ten inches or more fell from Palacios westward to near San Antonio and southward into Mexico. Totals of 15-20 inches were measured at several places. Brownsville had a three day total of 15.57 inches.

Streams that normally flow at a little more than a trickle were turned into rampaging rivers. The Nueces River reached record heights from Three Rivers to its mouth. The Nueces River crested at 24.5 feet above flood stage on September 23. Two days later it was only down 1.5 ft. The Lavaca River exceeded flood stage by 15.6 feet on the 23rd while the San Antonio River crested at 57 ft. - 22 ft. above flood stage-the same day. In an area of 40 thousand square miles, tens of thousands of homes and businesses as well as cattle and crops were drowned or swept away. The flooding also extended into 11 Mexican states.

The hurricane and floods have left 300,000 U.S. and Mexican refugees homeless. There are only 11 known deaths in Texas and one in northern Mexico. Four of the deaths in Texas resulted from hurricane-connected tornadoes. Hurricanes are well known for spawning tornadoes but not in the numbers reported in Beulah; 65 were reported, 32 of which have been confined. The previous high was 26 tornadoes with Carla of September 1961.

Beulah, although not as large or intense as a number of severe hurricanes that have occurred in the North Atlantic, will become the second billion dollar hurricane on record; Betsy caused \$1.5 billion damage when she swept into Louisiana in September of 1965. Hurricane Carla in September of 1961 was the last major hurricane to hit the Texas coast. The hurricane, generating 125-knot winds, moved inland near Port O'Connor. Carla caused 34 deaths and \$400 million in damages. Eleven deaths of Carla were due to tornadoes spawned by the hurricane.

The Air Force, ESSA, and Navy reconnaissance kept Beulah under continual surveillance during the life of the storm. The center or eye locations acquired by penetration of the storm or by the aircraft radar were relayed to the National Hurricane Center in Miami.

The eye of Hurricane Beulah was detected on the Weather Bureau's radar at Brownsville at a distance of 275 miles (240 nautical miles) to the southeast at twelve minutes past midnight on September 19. The hurricane was tracked continuously until about noon on September 22 when the eye filled moving towards the Mexican border south of Laredo.

With references to alerting the people to the dangers of one of the most vicious hurricanes to strike the Texas coast, a hurricane watch was issued for the Texas coast 64 hours before hurricane force winds struck the Brownsville area. A hurricane warning was issued at 5:00 AM on September 19, for the Texas coast from Brownsville to Port Aransas 20 hours before hurricane force winds moved into the Brownsville area. Hurricane Warning flags were flying along 130 miles of the coast. Evacuation of Padre Island was recommended two hours after hurricane warnings were issued and approximately 18 hours before hurricane force winds reached the southern most tip of Padre Island.

...BEULAH THREATENS JAMAICA...

HURRICANE WARNINGS REMAIN IN EFFECT FOR SOUTHERN HAITI. GALE WARNINGS HAVE BEEN DISCONTINUED FOR THE BARAHONA PENINSULA AND NORTHERN HAITI.

HURRICANE BEULAH CONTINUES ITS MOVEMENT WESTWARD PARALLEL TO THE SOUTH COAST OF HAITI ALONG A COURSE WHICH WILL BRING IT OVER OR NEAR THE NORTH COAST OF JAMAICA TUESDAY FORENOON.

AT 6 PM EDT...2200Z...HURRICANE BEULAH WAS LOCATED AT LATITUDE 17.7 NORTH LONGITUDE 73.2 WEST OR ABOUT 75 MILES SOUTHWEST OF PORT-AU-PRINCE HAITI. IT IS FORECAST TO CONTINUE BETWEEN WEST AND WEST NORTHWEST FOR THE NEXT 24 HOURS AT A SLIGHTLY FASTER SPEED.

WHILE THE LATEST NAVY RECONNAISSANCE INDICATES THAT CENTRAL PRESSURES ROSE AND THE MAXIMUM WINDS DIMINISHED TO 75 MPH AFTER THE ENCOUNTER WITH THE MOUNTAINS OF THE DOMINICAN REPUBLIC...THIS REMAINS A SMALL BUT POTENTIAL DANGEROUS STORM AND ALL EVIDENCES ARE THAT IT WILL REINTENSIFY WITHIN THE NEXT 12 HOURS.

ALL INTERESTS IN THE VICINITY OF JAMAICA SHOULD TAKE PRECAUTIONS AGAINST HURRICANE FORCE WINDS AND HIGH TIDES WHICH WILL BEGIN TO AFFECT THAT ISLAND LATE TONIGHT.

SHIPPING IN THE PATH OF THIS STORM SHOULD EXERCISE CAUTION AND SMALL CRAFT ALONG THE SOUTH COAST OF HAITI THE SOUTHEAST COAST OF CUBA AND JAMAICA SHOULD SEEK SAFE HARBOR OR REMAIN IN PORT.

AS INDICATED IN THE EARLIER ADVISORY...THE GREATEST THREAT OF HURRICANE FORCE WINDS IS ALONG THE SOUTHERN SHORES.

REPORTS DURING THE NIGHT SHOW THAT BEULAH IS A MINIMAL HURRICANE WITH HIGHEST WINDS ESTIMATED 75 MPH. GALES IN SQUALLS EXTEND OUT 125 MILES FROM THE CENTER.

GALES AND HEAVY RAINS ARE LIKELY OVER THE REMAINDER OF JAMAICA WHILE TIDES MAY RISE TO AS MUCH AS 5 FEET ABOVE NORMAL IN LOCAL AREAS ALONG THE SOUTH SHORE. SMALL CRAFT AROUND THE ISLAND SHOULD REMAIN IN SAFE HARBOR.

AIR FORCE RECONNAISSANCE FOUND BEULAH MOVING A LITTLE FURTHER SOUTH OF JAMAICA THAN INDICATED IN EARLIER REPORTS STILL A MINIMAL HURRICANE WITH LITTLE EVIDENCE OF REINTENSIFICATION. WHILE THIS REDUCES THE THREAT TO JAMAICA IT IS TOO EARLY FOR PRECAUTIONS TO BE RELAXED. SOME PORTIONS OF THE ISLAND WILL RECEIVE HEAVY SQUALLS AND GALE FORCE WINDS WITH HEAVY RAIN AND TIDES ON THE SOUTH COAST MAY RANGE AS MUCH AS 5 FEET ABOVE NORMAL.

AT NOON EDT...1600Z...BEULAH WAS CENTERED NEAR LATITUDE 17.2 NORTH LONGITUDE 75.8 WEST OR ABOUT 80 MILES EAST SOUTHEAST OF KINGSTON JAMAICA. IT IS MOVING WESTWARD AT ABOUT 10 MPH. HIGHEST WINDS ARE 70 TO 75 MPH IN SQUALLS NEAR THE CENTER. SQUALLS AND GALE FORCE WINDS EXTEND OUTWARD 80 MILES MAINLY TO THE NORTH AND EAST.

SATELLITE PICTURES OF BEULAH INDICATE THAT ITS LOSS OF INTENSITY IS DUE TO CHANGES THAT HAVE OCCURRED IN THE CIRCULATION OVER THE STORM...A CONDITION WHICH WILL PROBABLY CONTINUE FOR THE NEXT 18 TO 24 HOURS AFTER WHICH RE-INTENSIFICATION CAN BE EXPECTED ALONG WITH A CHANGE IN DIRECTION OF MOVEMENT TO THE WEST NORTHWEST OR NORTHWEST.

...BEULAH HESITATES AS SHE APPROACHES THE YUCATAN CHANNEL...

ALL INTERESTS IN THE NORTHEAST YUCATAN AREA SHOULD BE PREPARED FOR GALE FORCE WINDS LATER TODAY AND HURRICANE FORCE WINDS ALONG EXPOSED COASTAL AREAS TONIGHT. SHIPPING IN THE YUCATAN CHANNEL SHOULD EXERCISE GREAT CAUTION DURING THE NEXT 24 HOURS. BEULAH HAS NOW INTENSIFIED FURTHER WITH MAXIMUM WINDS OF 120 MPH OR MORE.

AT 12 NOON...1600Z...BEULAH WAS LOCATED BY RADAR AND SATELLITE PICTURES NEAR LATITUDE 20.1 NORTH...LONGITUDE 85.5 WEST OR ABOUT 280 MILES SOUTHWEST OF HAVANA.

BEULAH HAS BEEN MOVING NORTHWESTWARD ABOUT 10 MPH BUT HAS REACHED A POSITION WHERE THE STEERING FORCES MAKE ITS FUTURE COURSE UNCERTAIN. IF PRESENT TRENDS CONTINUE IT WILL MOVE MORE SLOWLY ON A COURSE BETWEEN NORTHWEST AND NORTH NORTHWEST AND WILL DRIFT THROUGH THE YUCATAN CHANNEL INTO THE GULF OF MEXICO IN THE NEXT 24 TO 30 HOURS.

THE CENTRAL PRESSURE HAS FALLEN TO ABOUT 960 MILLIBARS 28.35 INCHES. AND SURFACE WINDS ARE EXPECTED TO CONTINUE INCREASING FOR ANOTHER 24 HOURS. HOWEVER BEULAH IS STILL A RELATIVELY SMALL STORM IN SIZE. ALTHOUGH IT IS NOW WITHIN 100 MILES OF COZUMEL ISLAND WINDS HAVE NOT BEGUN TO INCREASE THERE AND PRESSURES ARE HOLDING STEADY. AT PRESENT HURRICANE FORCE WINDS ARE CONFINED TO A SMALL AREA NEAR THE CENTER ALTHOUGH GALES EXTEND 125 MILES TO THE NORTH AND EAST AND 80 MILES TO THE SOUTH AND WEST. A CONSIDERABLE EXPANSION OF THE AREA OF HURRICANE FORCE WINDS CAN BE EXPECTED IN THE NEXT 24 HOURS.

...BEULAH STALLS SOUTH OF THE YUCATAN CHANNEL...

AIR FORCE RECONNAISSANCE PLANES TRACKING BEULAH CONTINUOUSLY REPORT THAT THE STORM CENTER HAS STOPPED ITS NORTHWARD MOVEMENT AND IS NOW DRIFTING IN A SLOW LOOPING MOVEMENT WEST AND SOUTHWARD. THIS LEAVES ITS FUTURE MOVEMENT UNCERTAIN AND EXTENDS THE AREAS WHICH MAY BE THREATENED BY THIS DANGEROUS STORM. ALL INTERESTS IN EASTERN YUCATAN...EXTREME WESTERN CUBA AND SHIPPING IN THE NORTHWEST CARIBBEAN SHOULD REMAIN ALERT FOR EVIDENCES OF THE FUTURE COURSE OF THIS STORM.

PRECAUTIONS ALREADY TAKEN AT COZUMEL ISLAND AND NORTHEASTERN YUCATAN SHOULD NOT BE RELAXED. TIDES WILL PROBABLY BE 3 TO 7 FEET ABOVE NORMAL ON MANY SECTIONS OF THE YUCATAN EAST COAST REGARDLESS OF THE FUTURE COURSE OF BEULAH.

AT 3 PM...1900Z...BEULAH WAS LOCATED AT LATITUDE 19.5 NORTH...LONGITUDE 85.7 WEST OR ABOUT 320 MILES SOUTHWEST OF HAVANA DRIFTING SLOWLY SOUTHWARD. MAXIMUM WINDS ARE ABOUT 120 MPH NEAR THE CENTER WITH GALE FORCE WINDS EXTENDING OUTWARD 120 MILES NORTHEASTWARD AND 70 TO 80 MILES SOUTHWESTWARD.

BEULAH'S FUTURE MOVEMENT IS UNCERTAIN BUT THE CHANGES NOW OCCURRING IN ITS ENVIRONMENT INDICATE THAT IT WILL SOON RESUME A SLOW MOVEMENT TOWARD THE NORTH.

ADVISORY NO. 37 6 PM EDT SATURDAY SEPTEMBER 16, 1967

...BEULAH STATIONARY...VACILLATES AS TO FUTURE COURSE.

FOR THE LAST THREE HOURS BEULAH HAS SHOWN LITTLE MOVEMENT AND ITS FUTURE COURSE REMAINS IN DOUBT. HOWEVER A REPORT JUST RECEIVED FROM COZUMEL INDICATES IT MAY NOW BE DRIFTING TOWARD THE NORTHEAST YUCATAN COAST. PRECAUTIONS ALREADY IN EFFECT IN YUCATAN MUST BE MAINTAINED AND ALL INTEREST ON COZUMEL SHOULD SEEK SHELTER ON HIGH GROUND.

SQUALLS MOVING OUT OF THE HURRICANE TO THE NORTH AND NORTHEAST HAVE BROUGHT HEAVY RAIN AND NEAR GALE FORCE WINDS TO SOME SECTIONS OF WESTERN CUBA AND INTO THE FLORIDA STRAITS. UNTIL BEULAH RESUMES A DEFINITE MOVEMENT AND ITS TRACK IS ASCERTAINED ALL INTERESTS IN WESTERN CUBA AND SHIPPING IN THE YUCATAN CHANNEL AND WESTERN STRAITS OF FLORIDA SHOULD BE ALERT FOR EVASIVE ACTION FROM THIS DANGEROUS STORM.

AT 6 PM...2200Z...BEULAH WAS LOCATED NEAR LATITUDE 19.3 NORTH...LONGITUDE 85.7 WEST OR ABOUT 330 MILES SOUTHWEST OF HAVANA. MAXIMUM WINDS ARE ABOUT 125 MPH WITHIN 20 MILES OF CENTER AND GALE FORCE WINDS EXTEND OUTWARD 150 MILES TO THE NORTHEAST AND 70 MILES TO THE SOUTHWEST. CONDITIONS FAVOR AN EXPANSION OF THE SIZE OF THIS STORM AND OF THE AREA AFFECTED BY GALES DURING THE NEXT 12 TO 24 HOURS.

WHILE BEULAH IS NOT EXPECTED TO MOVE ANY APPRECIABLE DISTANCE DURING THE NEXT 12 HOURS IT IS EXPECTED THAT IT WILL GRADUALLY MOVE NORTHWARD AND EMERGE INTO THE GULF OF MEXICO WITHIN THE NEXT 36 TO 48 HOURS.

ASIDE FROM OCCASIONAL SQUALLS AT CONSIDERABLE DISTANCE FROM THE STORM CENTER NO COASTAL AREAS OF THE U.S. ARE LIKELY TO BE AFFECTED WITHIN THE NEXT TWO DAYS.

AT 8 AM SEVERE HURRICANE BEULAH WAS CENTERED ABOUT 200 MILES SOUTHEAST OF BROWNSVILLE AND MOVING TOWARD BROWNSVILLE AT 10 MPH.

ALL INTERESTS ARE REMINDED THAT SEVERE CONDITIONS OF WIND RAIN AND TIDES WILL PRECEDE THE ACTUAL CENTER BY 100 TO 150 MILES AND 8 TO 10 HOURS IN TIME. PREPARATIONS SHOULD BE GEARED ACCORDINGLY.

RAINS OF 8 TO 10 INCHES MAY OCCUR IN THE PORT ISABEL AND OTHER COASTAL SECTIONS...BROWNSVILLE SANBENITO HARLINGEN AND RAYMONDVILLE AREAS DURING THE PASSAGE OF BEULAH. PEOPLE LIVING IN PLACES IN THESE AREAS THAT ARE SUBJECT TO FLOODING DUE TO POOR DRAINAGE SHOULD MAKE PREPARATIONS TO EVACUATE SHOULD SUFFICIENT RAINS OCCUR TO PRODUCE FLOODING.

STATEMENT 9 AM CDT TUESDAY SEPTEMBER 19, 1967

AT 9 AM SEVERE HURRICANE BEULAH WAS CENTERED AT 23.7 NORTH AND 95.7 WEST OR ABOUT 190 MILES SOUTHEAST OF BROWNSVILLE AND WAS MOVING NORTHWEST ABOUT 10 MPH BUT A LITTLE FASTER SPEED IS EXPECTED LATER TODAY.

TIDES ALONG SOUTH PADRE ISLAND ARE ABOUT 1.5 FEET ABOVE MSL WHICH IS ABOUT 1 FOOT ABOVE NORMAL AT THIS HOUR. THE SEA HOWEVER IS VERY ROUGH. TIDES WILL INCREASE DURING THE DAY AND TONIGHT WITH A MAXIMUM OF NEAR 10 FEET EXPECTED AS BEULAH PASSES INLAND TONIGHT.

PERSONS IN OTHER AREAS SUBJECT TO FLOODING FROM POOR DRAINAGE DUE TO RAINS OF 5 OR MORE INCHES SHOULD ALSO PREPARE FOR EVACUATION.

STATEMENT 10:30 AM CDT TUESDAY SEPTEMBER 19, 1967

SEVERE HURRICANE BEULAH IS NOW ABOUT 175 MILES SOUTHEAST OF BROWNSVILLE AND MOVING NORTHWESTWARD ABOUT 9 MPH AND IS EXPECTED TO MOVE INLAND NEAR THE MOUTH OF THE RIO GRANDE RIVER TONIGHT.

WINDS ARE INCREASING IN THE PORT ISABEL BROWNSVILLE AREA AND WILL CONTINUE TO INCREASE DURING THE AFTERNOON WITH RAIN SHOWERS AND RAIN SQUALLS. PORT ISABEL NOW HAS WINDS OF 27 MPH WITH GUSTS TO 36 MPH. AT BROWNSVILLE THE WIND IS ABOUT 15 MPH.

THE TIDE ALONG SOUTH PADRE ISLAND IS ABOUT 1.5 FEET ABOVE MSL WHICH IS ABOUT 1 FOOT ABOVE NORMAL FOR THIS HOUR. TIDES WILL INCREASE ALONG SOUTH PADRE ISLAND THIS AFTERNOON AND TONIGHT REACHING AS HIGH AS 10 FEET MSL AS THE CENTER PASSES INLAND.

ALL PRECAUTIONS SHOULD BE RUSHED TO COMPLETION JUST AS SOON AS POSSIBLE. EVACUATION OF SOUTH PADRE ISLAND SHOULD BE COMPLETED THIS MORNING.

HEAVY RAINS OF UP TO 10 INCHES MAY OCCUR NEAR THE CENTER OF THE STORM AND PERSONS IN AREAS OF POOR DRAINAGE SHOULD BE ALERT TO THE FLOOD HAZARD DUE TO THIS CONDITION.

STATEMENT 1 PM CDT TUESDAY SEPTEMBER 19, 1967

SEVERE HURRICANE BEULAH HAS STALLED TEMPORARILY BUT IS EXPECTED TO RESUME ITS NORTHWEST OR WEST NORTHWEST MOVEMENT THIS AFTERNOON. IT IS LOCATED AT 1 PM NEAR 23.8 NORTH AND 96.1 WEST OR ABOUT 170 MILES SOUTHEAST OF BROWNSVILLE.

BEULAH IS EXPECTED TO MOVE INLAND NEAR OR SLIGHTLY SOUTH OF THE MOUTH OF THE RIO GRANDE RIVER TONIGHT.

SQUALLS ARE OCCURRING IN THE BROWNSVILLE PORT ISABEL AREA AND THE WIND HAS REACHED 45 MPH IN GUSTS AT BOTH PORT ISABEL AND BROWNSVILLE DURING THE PAST HOUR.

RAIN SQUALLS WILL CONTINUE DURING THE AFTERNOON AND THE WIND WILL INCREASE TO NEAR HURRICANE FORCE BY EARLY TONIGHT.

TIDES ALONG SOUTH PADRE ISLAND ARE ABOUT 2 FEET MSL WHICH IS MORE THAN A FOOT ABOVE NORMAL FOR THIS HOUR. TIDES ALONG THE COAST NEAR THE MOUTH OF THE RIO GRANDE MAY REACH AS HIGH AS 12 FEET MSL AS THE HURRICANE PASSES INLAND.

RAINS OF 8 TO 12 INCHES MAY OCCUR NEAR THE CENTER OF THE STORM AS IT PASSES INLAND.

SOUTH PADRE ISLAND AND PORT ISABEL HAVE BEEN EVACUATED AND THE QUEEN ISABELA CAUSEWAY IS CLOSED.

ANY PRECAUTIONS NOT ALREADY TAKEN SHOULD BE RUSHED TO COMPLETION THIS AFTERNOON JUST AS SOON AS POSSIBLE.

STATEMENT 3 PM CDT TUESDAY SEPTEMBER 19, 1967

SEVERE HURRICANE BEULAH IS LOCATED ABOUT 170 MILES SOUTHEAST OF BROWNSVILLE. IT IS ALMOST STATIONARY BUT IS EXPECTED TO RESUME ITS NORTHWESTWARD MOVEMENT THIS AFTERNOON AND PASS INLAND NEAR OR A SHORT DISTANCE SOUTH OF THE MOUTH OF THE RIO GRANDE RIVER TONIGHT.

TIDES ALONG SOUTH PADRE ISLAND ARE ABOUT 2 FEET MSL OR A LITTLE MORE THAN A FOOT ABOVE NORMAL FOR THIS HOUR. TIDES ARE EXPECTED TO RISE THIS AFTERNOON AND TONIGHT AND REACH 10 TO 12 FEET IN THE AREA WHERE THE CENTER CROSSES THE COAST.

RAIN SQUALLS AND GALE WINDS HAVE OCCURRED IN THE BROWNSVILLE PORT ISABEL AREA THIS AFTERNOON AND MORE SQUALLS AND INCREASING WINDS ARE EXPECTED THIS AFTERNOON WITH THE WINDS REACHING HURRICANE FORCE EARLY TONIGHT.

RAINFALL IN THE IMMEDIATE AREA OF THE HURRICANE PATH WILL ACCUMULATE TO MORE THAN 10 INCHES DURING THE STORMS PASSAGE WHICH WILL CAUSE SERIOUS LOCAL FLOODING WHERE DRAINAGE IS POOR.

STATEMENT 5 PM CDT TUESDAY SEPTEMBER 19, 1967

THE SEVERE HURRICANE BEULAH AT 5 PM WAS CENTERED ABOUT 145 MILES SOUTHEAST OF BROWNSVILLE AND MOVING NORTHWESTWARD ABOUT 10 MPH.

THE HURRICANE IS A DANGEROUS STORM WITH WINDS OF 175 MPH NEAR THE CENTER. IT IS EXPECTED TO REACH THE COAST A LITTLE SOUTH OF THE MOUTH OF THE RIO GRANDE AROUND 6 AM WEDNESDAY. HURRICANE WINDS SHOULD REACH THE BROWNSVILLE PORT ISABEL AREA AROUND MIDNIGHT TONIGHT.

TIDES ALONG SOUTH PADRE ISLAND ARE ONLY ABOUT 2 FEET MSL BUT THEY WILL RISE RAPIDLY THE LAST FEW HOURS BEFORE LANDFALL OF THE HURRICANE. TIDES IN THE VICINITY OF LANDFALL CAN BE AS MUCH AS 15 FEET MSL. THIS MEANS THAT ALL OF SOUTH PADRE ISLAND WILL BE FLOODED AND THAT PORT ISABEL WILL BE UNDER SEVERAL FEET OF WATER IN MOST SECTIONS. ALL PERSONS WHO HAVE NOT LEFT SOUTH PADRE ISLAND AND PORT ISABEL ARE ADVISED TO DO SO AT ONCE. THIS IS A VERY DANGEROUS STORM AND WILL PRODUCE VERY HIGH TIDES ACCOMPANIED BY VERY STRONG WIND.

VERY HEAVY RAIN WILL ACCOMPANY THIS STORM AND BECAUSE OF ITS SLOW MOVEMENT THE ACCUMULATIONS IN THE COASTAL SECTIONS OF THE LOWER RIO GRANDE VALLEY COULD AMOUNT TO MORE THAN 10 INCHES.

WE REPEAT IF THERE ARE ANY PERSONS LEFT IN PORT ISABEL AND SOUTH PADRE ISLAND THEY SHOULD LEAVE BEFORE THE HIGH TIDE CUTS OFF THEIR ESCAPE.

STATEMENT 6 PM CDT TUESDAY SEPTEMBER 19, 1967

TO CLARIFY EVACUATION DIRECTIONS IN SPECIAL ADVISORY NEW ORLEANS 6 PM CDT SEPTEMBER 19, 1967.

QUOTE...EMERGENCY EVACUATION SHOULD BE COMPLETED IMMEDIATELY FOR THE COASTAL SECTIONS WITHIN 50 MILES OF THE MOUTH OF THE RIO GRANDE RIVER...UNQUOTE.....THIS SHOULD READ...QUOTE...EMERGENCY EVACUATION SHOULD BE COMPLETED IMMEDIATELY FOR THE BEACH SECTIONS OF THE COAST WITHIN 50 MILES OF THE MOUTH OF THE RIO GRANDE...UNQUOTE.

STATEMENT 7 PM CDT TUESDAY SEPTEMBER 19, 1967

THE VERY SEVERE AND DANGEROUS HURRICANE BEULAH IS EXPECTED TO CROSS THE COAST LINE AROUND 6 AM WEDNESDAY A LITTLE SOUTH OF THE MOUTH OF THE RIO GRANDE RIVER.

SINCE THE HURRICANE IS ACCOMPANIED BY WINDS OF 160 MPH OR HIGHER AND A CENTRAL PRESSURE OF 27.26 INCHES STORM TIDES OF UP TO 15 FEET MSL WILL OCCUR FOR SOME 50 MILES NORTH OF THE LANDFALL POINT ALONG SOUTH PADRE ISLAND AND ANY PERONS STILL ON SOUTH PADRE ISLAND OR IN PORT ISABEL SHOULD LEAVE THESE AREAS BEFORE THEIR ESCAPE ROUTE IS CUT. THIS AMOUNT OF TIDE WILL WASH A GOOD PORTION OF SOUTH PADRE ISLAND AND A LARGE SECTION OF PORT ISABEL WILL BE UNDER SEVERAL FEET OF WATER. ANY PERSON IN PORT MANSFIELD SHOULD ALSO EVACUATE.

SINCE WINDS OF NEAR 175 MPH WILL ACCOMPANY THE STORM ALL PEOPLE WHO LIVE IN HOUSES CONSIDERED TOO WEAK TO WITHSTAND THIS WIND VELOCITY SHOULD SEEK SAFER QUARTERS.

RAINS OF UP TO 10 TO 15 INCHES OF RAINFALL WILL LIKELY ACCUMULATE NEAR THE TRACK OF THIS STORM. SUCH AMOUNTS OF RAINFALL WILL CAUSE SERIOUS LOCAL FLOODING IN AREAS OF BROWNSVILLE OLMITO SAN BENITO HARLINGEN RAYMONDVILLE AND OTHER NEARBY COMMUNITIES AND PERSONS LIVING IN SECTIONS KNOWN TO FLOOD WITH SUCH LOCAL RAINFALL SHOULD SEEK OTHER QUARTERS.

THE TIDE ALONG SOUTH PADRE ISLAND IS RISING AND IS NOW 2.5 FEET MSL WHICH IS ABOUT 2 FEET ABOVE NORMAL FOR THIS HOUR. THE TIDE WILL CONTINUE TO RISE DURING THE NEXT SEVERAL HOURS AND WILL RISE VERY RAPIDLY A FEW HOURS BEFORE LANDFALL OF THE HURRICANE TO THE EXPECTED VALUE OF NEAR 15 FEET MSL ALONG SOUTH PADRE ISLAND. IT IS BECAUSE OF THIS EXPECTED VERY HIGH TIDE AND THE EXPECTED RAPID RISE DURING THE LAST HOURS BEFORE LANDFALL THAT ALL PERSONS ARE ADVISED TO GET OFF OF SOUTH PADE ISLAND AND LEAVE PORT ISABEL BEFORE ESCAPE ROUTES ARE CLOSED.

INCREASING WINDS WILL OCCUR DURING THE NIGHT REACHING HURRICANE FORCE AROUND MIDNIGHT TONIGHT. RAIN SQUALLS WILL BECOME MORE FREQUENT TONIGHT.

REPEATING...WINDS OF 160 TO 175 MPH ARE EXPECTED DURING THE PASSAGE OF THIS VERY SEVERE AND DANGEROUS HURRICANE BEULAH AND TIDES OF NEAR 15 FEET WILL OCCUR ALONG SOUTH PADRE ISLAND...ANY REMAINING PERSONS ON SOUTH PADRE ISLAND AND IN PORT ISABEL SHOULD EVACUATE IMMEDIATELY.

SINCE RAINS OF UP TO 15 INCHES ARE LIKELY TO OCCUR IN THE BROWNSVILLE PORT ISABEL AREA RESIDENTS LIVING IN AREAS SUBJECT TO LOCAL FLOODING DUE TO POOR DRAINAGE SHOULD ALSO SEEK OTHER QUARTERS.

PERSONS LIVING IN FLIMSY HOUSES SHOULD ALSO SEEK OTHER QUARTERS.

STATEMENT 9 PM CDT TUESDAY SEPTEMBER 19, 1967

EXTREMELY DANGEROUS HURRICANE BEULAH CONTINUES TO APPROACH THE LOWER TEXAS COAST AT 8 TO 10 MPH FROM A POSITION 115 MILES SOUTHEAST OF BROWNSVILLE. IT IS EXPECTED TO REACH THE COAST A SHORT DISTANCE SOUTH OF THE MOUTH OF THE RIO GRANDE RIVER WEDNESDAY MORNING. THE 160 MPH WINDS AND CENTRAL PRESSURE OF 27.26 INCHES WILL PRODUCE STORM TIDES ALONG THE SOUTH PADRE ISLAND AND ALONG BOCA CHICA BEACH OF NEAR 15 FEET MSL.

TIDES AT SOUTH PADRE ISLAND ARE NOW 2.5 FEET MSL. THIS VALUE IS 2 FEET ABOVE NORMAL FOR THIS TIME. THE TIDES WILL CONTINUE TO RISE TONIGHT AND AT INCREASING RATE SEVERAL HOURS BEFORE LANDFALL OF THE HURRICANE. ANY PERSONS STILL ON SOUTH PADRE ISLAND OR IN PORT ISABEL SHOULD LEAVE BEFORE ESCAPE ROUTES ARE CUT.

WINDS AT BROWNSVILLE ARE NOW ABOUT 30 KNOTS AND WILL INCREASE TO GALE FORCE WITHIN THE NEXT HOUR OR TWO AND REACH HURRICANE FORCE AROUND MIDNIGHT OR A LITTLE LATER.

SQUALLS WILL BECOME MORE FREQUENT DURING THE NEXT FEW HOURS.

WE ARE APPROACHING HURRICANE CONDITIONS OR WILL BE SOON. ALL PERSONS SHOULD REMAIN INDOORS UNLESS IT IS ACTUALLY ESSENTIAL FOR YOU TO GO OUT INTO THE STORM.

KEEP TUNED TO YOUR RADIO OR TV FOR FUTURE ADVICES.

STATEMENT 11 PM CDT TUESDAY SEPTEMBER 19, 1967

RAIN SQUALLS AND GALE WINDS ARE OCCURRING OVER THE COASTAL SECTIONS OF THE VALLEY AND SCATTERED SHOWERS AND AN OCCASIONAL SQUALL ELSEWHERE OVER THE VALLEY. SQUALLS AND WIND WILL INCREASE DURING THE NEXT SEVERAL HOURS AND HURRICANE FORCE WINDS WILL REACH THE COASTAL SECTIONS IN 2 OR 3 HOURS.

TIDES ALONG SOUTH PADRE ISLAND ARE ABOUT 2.5 FEET MSL OR A LITTLE MORE THAN 2 FEET ABOVE NORMAL FOR THIS HOUR. TIDES WILL INCREASE DURING THE COMING HOURS AND INCREASE RAPIDLY A FEW HOURS BEFORE LANDFALL OF THE HURRICANE. TIDES ALONG SOUTH PADRE ISLAND AND BOCA CHICA BEACH WILL REACH NEAR 15 FEET MSL AS THE STORM PASSES INLAND.

SINCE WINDS AND SQUALLS WILL INCREASE DURING THE NEXT SEVERAL HOURS PERSONS ARE URGED TO REMAIN INDOORS AND NOT SUBJECT THEMSELVES TO THE STORM CONDITIONS.

WINDS AT BROWNSVILLE ARE NOW GUSTING TO NEAR 60 MPH.

STATEMENT 2 AM CDT WEDNESDAY SEPTEMBER 20, 1967

HURRICANE BEULAH APPARENTLY HAS TURNED TO A MORE NORTHERLY COURSE AND IT APPEARS NOW THAT THE CENTER WILL PASS JUST EAST OF THE MOUTH OF THE RIO GRANDE RIVER AND THENCE NORTHWARD ALONG OR JUST OFFSHORE OF PADRE ISLAND.

THIS LESSENS THE THREAT TO THE BROWNSVILLE PORT ISABEL AREA SLIGHTLY. THE STORM TIDES ALONG BOCA CHICA BEACH AND SOUTH PADRE ISLAND WILL STILL BE HIGH BUT NOT AS HIGH AS IF THE STORM HAD GONE INLAND SOUTH OF THE MOUTH OF THE RIO GRANDE. TIDES THIS AREA SHOULD BE 10 TO 12 FEET MSL.

WINDS WILL PROBABLY BE ABOUT AS STRONG WITH THE ANTICIPATED COURSE AS WITH THE PREVIOUSLY PREDICTED COURSE. WE ARE NOW EXPERIENCING WINDS OF HURRICANE FORCE HERE AT BROWNSVILLE. CURRENTLY THE WIND IS GUSTING 85 MPH.

WE HAVE LOST POWER TO OUR TIDE GAGE AT SOUTH PADRE ISLAND AND NO TIDE OBSERVATIONS ARE AVAILABLE. TWO HOURS AGO THE TIDE THERE WAS 2.5 FEET MSL WHICH WAS ABOUT 2 FEET ABOVE NORMAL.

STATEMENT 3 AM CDT WEDNESDAY SEPTEMBER 20, 1967

HURRICANE BEULAH IS ABOUT 45 MILES SOUTHEAST OF BROWNSVILLE AND MOVING TOWARD THE NORTH NORTHWEST ABOUT 12 MPH. IT IS EXPECTED TO PASS JUST OFF THE MOUTH OF THE RIO GRANDE RIVER IN ABOUT 4 HOURS.

HURRICANE WINDS ARE BEING EXPERIENCED AT BROWNSVILLE WITH VELOCITIES AROUND 70 MPH AND THE HIGHEST GUST SO FAR HAS BEEN 104 MPH.

HURRICANE WINDS WILL CONTINUE FOR SEVERAL HOURS.

STATEMENT 5 AM CDT WEDNESDAY SEPTEMBER 20, 1967

HURRICANE BEULAH IS AN EXTREMELY DANGEROUS HURRICANE AND CONTINUES TO BATTER THE BROWNSVILLE PORT ISABEL AREA.

HIGHEST GUSTS AS OF 5 AM HAS BEEN 109 MPH. AT PRESENT PRESSURE CONTINUES TO FALL RAPIDLY AND WAS 28.72 INCHES AT SEA LEVEL AT 5 AM.

AT 5 AM BEULAH WAS LOCATED AT 25.7 NORTH...97.1 WEST...OR ABOUT THE VICINITY OF THE MOUTH OF THE RIO GRANDE RIVER. MOVEMENT OF BEULAH IS TO THE NORTH NORTHWEST AT 12 MPH AND PRESENT INDICATIONS ARE THE EYE OF BEULAH WILL REMAIN OFFSHORE EAST OF SOUTH PADRE ISLAND.

HURRICANE BEULAH IS EXTREMELY DANGEROUS AND CAUTION SHOULD BE EXERCISED AT DAY BREAK. PERSONS THAT ARE NOT ON RESCUE MISSIONS SHOULD REMAIN IN THEIR HOMES OR SHELTERS. REMEMBER THAT HURRICANE FORCE WINDS WILL CONTINUE IN THE BROWNSVILLE PORT ISABEL AREA UNTIL THIS AFTERNOON. ALL INTERESTS STAY TUNED TO YOUR RADIO AND TV FOR LATER ADVICES.

CAUTION IS ADVISED AROUND LOOSE HIGH LINE WIRES AND FLYING DEBRIS. THERE HAS BEEN REPORTS OF MANY DOWNED WIRES AND FLYING DEBRIS AT THIS TIME.

STATEMENT 7 AM CDT WEDNESDAY SEPTEMBER 20, 1967

AT 7 AM THE CENTER OF HURRICANE BEULAH WAS LOCATED BY THE BROWNSVILLE RADAR ABOUT 16 MILES EAST NORTHEAST OF BROWNSVILLE. BROWNSVILLE WINDS CONTINUE FROM THE NORTH AT AROUND 45 MPH.

BROWNSVILLE RECORDED 1.05 INCHES OF RAIN SINCE MIDNIGHT. ALTHOUGH THIS WILL BE OFFICIAL IT IS CONSIDERED A POOR SAMPLE BECAUSE OF THE STRONG WINDS PREVAILING DURING THE PERIOD PREVENTED AN ACCURATE CATCH OF RAIN.

THERE IS NO FLOODING HOWEVER AROUND THE AIRPORT.

WE HAVE NO RECORD OR INFORMATION RELATIVE TO TIDES ALONG THE SOUTH PADRE ISLAND BECAUSE OF LOSS OF POWER TO THE TIDE GAGE AT THE ISLAND. THE BAROMETRIC PRESSURE AT BROWNSVILLE IS 28.21. IT IS STILL FALLING. THE HIGHEST WIND OBSERVED AHEAD OF THE STORM WAS 109 MPH.

STATEMENT 9 AM CDT WEDNESDAY SEPTEMBER 20, 1967

BROWNSVILLE RADAR INDICATES HURRICANE CENTER ABOUT 4 MILES EAST OF SAN BENITO NORTHEAST OF BROWNSVILLE AND MOVING TOWARD THE NORTH NORTHWEST AT ABOUT 12 KNOTS.

BROWNSVILLE WIND IS SOUTH SOUTHWEST 50 KNOTS WITH GUSTS TO 85 KNOTS. RAIN SQUALLS CONTINUE. LOWEST BAROMETER WAS 28.05 INCHES AND OCCURRED AT 8 AM CDT.

HURRICANE WINDS WILL CONTINUE ALONG THE COAST FROM PORT ISABEL TO PORT MANSFIELD AND INLAND AS FAR AS WESLACO FOR ANOTHER 2 TO 3 HOURS AND GALE WINDS FOR 4 TO 5 HOURS.

ALL PERSONS SHOULD MAINTAIN PRECAUTIONARY MEASURES FOR PERSONAL SAFETY UNTIL THE WINDS SUBSIDE TO A SAFE VALUE.

HURRICANE WARNINGS ARE STILL CONTINUED FROM PORT ISABEL TO PORT MANSFIELD.

STATEMENT 11 AM CDT WEDNESDAY SEPTEMBER 20, 1967

HURRICANE BEULAH IS LOCATED A SHORT DISTANCE EAST OF HARLINGEN AND IS MOVING NORTH NORTHWESTWARD ABOUT 10 MPH.

HURRICANE WINDS WILL CONTINUE IN THE HARLINGEN AREA FOR ANOTHER HOUR OR TWO THEN GALES FOR ANOTHER 3 OR 4 HOURS.

HURRICANE FORCE WINDS CONTINUE IN THE BROWNSVILLE AREA AS WINDS ARE CURRENTLY SOUTH SOUTHWEST AT 58 MPH GUSTY TO 76 MPH.

HEAVY RAIN SQUALLS IN THE LOWER VALLEY WILL CAUSE LOCAL FLOODING FOR THE REMAINDER OF THE AFTERNOON SO ALL PERSONS SHOULD EXERCISE CAUTION AND REMAIN IN THEIR HOMES OR SHELTERS.

RIVER STATEMENT 11 AM CDT THURSDAY SEPTEMBER 21, 1967

INFLOW TO RIO GRANDE RIVER FROM SAN JUAN RIVER HAS CAUSED ANOTHER RISE OF RIO GRANDE RIVER AT RIO GRANDE CITY WITH A STAGE THIS MORNING OF 6.4 FEET WEATHER BUREAU DATUM. THIS RISE WILL BE REFLECTED BELOW ANZALDUAS AS FOLLOWS...MERCEDES 16 FEET SATURDAY... BROWNSVILLE 13 FEET MONDAY.

ALL INTERESTS SHOULD TAKE APPROPRIATE PRECAUTIONS.

RIVER STATEMENT 11:40 AM CDT FRIDAY SEPTEMBER 22, 1967

THE RIO GRANDE RIVER AT RIO GRANDE CITY IS IN FLOOD WITH SOME 10 FEET ABOVE FLOOD STAGE WEATHER BUREAU DATUM.

WATER IS BEING DIVERTED INTO THE AMERICAN FLOODWAY SYSTEM AT ANZALDUAS DAM AND MEXICO IS TAKING WATER FROM THE RIVER INTO THE VARIOUS CANALS. BUT THE RIO GRANDE RIVER FROM MERCEDES TO THE GULF OF MEXICO WILL RISE TO NEAR FLOOD STAGE AT MERCEDES AND BROWNSVILLE DURING THE NEXT FEW DAYS.

THE FOLLOWING STAGES ARE INDICATED.....MERCEDES NEAR 21 FEET MONDAY. FLOOD STAGE IS 21 FEET.
BROWNSVILLE NEAR 17 FEET WEDNESDAY. FLOOD STAGE IS 18 FEET.

BICE

RIVER STATEMENT 9 AM CDT SUNDAY SEPTEMBER 24, 1967

THE RIO GRANDE RIVER AT RIO GRANDE CITY IS ABOUT 10 FEET ABOVE FLOOD STAGE. MUCH WATER IS FLOWING THROUGH THE AMERICAN FLOODWAY SYSTEM AND THE RIVER FLOW BELOW ANZALDUAS IS 60,000 CFS BUT IS GOING TO BE INCREASED.

BICE

RIVER STATEMENT 10 AM CDT MONDAY SEPTEMBER 25, 1967

THE RIO GRANDE RIVER FROM RIO GRANDE CITY TO THE GULF WILL EXPERIENCE ONE OF THE GREATEST FLOODS ON RECORD DURING THE NEXT FEW DAYS. THE RIVER AT RIO GRANDE CITY HAS BEEN ABOUT 10 FEET ABOVE FLOOD STAGE FOR THREE DAYS. THE AMERICAN FLOODWAY SYSTEM IS CARRYING ALL THE WATER IT CAN ACCOMMODATE. THE RIVER FLOW BECOME ANZALDUAS THIS MORNING WAS 95,000 CUBIC FEET PER SECOND.

THE RIVER STAGE AT MERCEDES THIS MORNING WAS 21.5 FEET AND RISING. FLOOD STAGE THERE IS 21 FEET. THE FOLLOWING STAGES ARE FORECAST... TUESDAY MORNING 23 FEET.....WEDNESDAY CREST OF 24.5 FEET.

THE RIVER STAGE AT BROWNSVILLE THIS MORNING IS 15 FEET WEATHER BUREAU GAGE. FLOOD STAGE IS 18 FEET. THE FOLLOWING STAGES ARE FORECAST.....16.5 FEET TUESDAY....17.5 FEET WEDNESDAY....18.5 FEET THURSDAY....19.5 FEET FRIDAY AND CREST OF 20.5 FEET ON SATURDAY.

THE ABOVE STAGES COULD BE ALTERED BY WATER BEING TAKEN FROM THE RIVER ABOVE BROWNSVILLE BY MEXICO BUT IN THE ABSENCE OF THIS THE WEATHER BUREAU BELIEVES THESE FORECAST STAGES TO BE VALID AND ALL INTERESTS SHOULD TAKE IMMEDIATE PRECAUTIONS AGAINST THE RISING WATER.

ANY PERSONS LIVING BETWEEN THE LEVEE AND THE RIVER FROM BELOW ANZALDUAS TO THE GULF SHOULD EVACUATE IMMEDIATELY.

IN THE BROWNSVILLE MATAMOROS AREA THE FOLLOWING ADDITIONAL INFORMATION IS GIVEN AS AN AID IN PROTECTING LIFE AND PROPERTY IN THIS AREA.....

FLOOD STAGE ON THE BROWNSVILLE WEATHER BUREAU RIVER GAGE IS 18 FEET. RELATIVE TO THIS GAGE THE APPROXIMATE TOPS OF THE LEVEES ON THE TEXAS AND MEXICO SIDES IS 23 FEET. TOP OF THE LEVEE AT THE GATEWAY BRIDGE IS 25 FEET.

IF ALL THE WATER IN THE RIVER BELOW ANZALDUAS IS ALLOWED TO PASS MERCEDES BROWNSVILLE AND MATAMOROS IT WILL PRODUCDE THE HIGHEST FLOOD ON RECORD. THE HIGHEST STAGES IN THE PAST ARE AS FOLLOWS...MERCEDES 23.5 ON APRIL 27, 1949...AT BROWNSVILLE 19.9 ON SEPTEMBER 16, 1942.

REPEATING ALL PERSONS LIVING BETWEEN THE LEVEES AND THE RIVER FROM BELOW ANZALDUAS TO BELOW BROWNSVILLE SHOULD EVACUATE IMMEDIATELY.

RIVER STATEMENT 9:30 AM CDT TUESDAY SEPTEMBER 26, 1967

THE RIO GRANDE RIVER CONTINUES IN FLOOD FROM RIO GRANDE CITY TO BELOW MERCEDES BUT WATER IS BEING TAKEN OFF INTO MEXICO. BECAUSE OF THE INABILITY TO KNOW JUST HOW MUCH WATER CAN BE DIVERTED INTO MEXICO THE THE FOLLOWING STAGES ARE FORECAST.....

MERCEDES 24.5 FEET WEDNESDAY...FLOOD STAGE IS 21 FEET.

BROWNSVILLE 18.5 FEET THURSDAY...FLOOD STAGE IS 18 FEET. WITHOUT MUCH DIVERSION INTO MEXICO THE STAGE AT BROWNSVILLE COULD REACH A MAXIMUM OF NEAR 20 FEET BY SATURDAY.

SINCE IT IS NOT KNOWN HOW MUCH WATER CAN BE DIVERTED INTO MEXICO ALL INTERESTS SHOULD TAKE PRECAUTIONS FOR THE MAXIMUM STAGE POSSIBLE.

ALL PERSONS LIVING BETWEEN THE RIVER AND THE RIVER LEVEES SHOULD EVACUATE.

BICE

STATEMENT 12 NOON CDT TUESDAY SEPTEMBER 26, 1967

POST FLIGHT SUMMARY OF FLIGHT OVER THE RIO GRANDE AND RIO SAN JUAN

DEPARTED BROWNSVILLE 9 AM TWIN COMMANCHE BILL LYND PILOT ACCOMPANIED BY DR. SEGAL OF BROWNSVILLE HERALD. FLIGHT WAS OVER AND AROUND MATAMOROS MEXICO ALONG THE RIO GRANDE TO REYNOSA MEXICO AND ANZALDUAS DAM THENCE ALONG RIO GRANDE TO RIO GRANDE CITY THENCE UP THE RIO SAN JUAN TO THE MARTE GOMEZ DAM.

FLOOD CONDITION EXIST FROM RIO GRANDE CITY TO BELOW THE MERCEDES RIVER STATION OPPOSITE THE VILLAGE OF RIO RICO MEXICO AND ALONG THE RIO SAN JUAN TO MARTE GOMEZ.

MUCH WATER IS IN EVIDENCE OVER THE VALLEY FROM THE RECENT RAINS. RAIN WATER BUT NOT FLOOD WATER FROM THE RIO GRANDE COVERS A RATHER LARGE SECTION OF SOUTHWEST MATAMOROS. A FEW MILES ABOVE MATAMOROS WATER IS BEING TAKEN FROM THE RIVER THROUGH THE MEXICAN CANAL NO. 3 AND ALTHOUGH THIS CANAL PASSES VERY NEAR THE PORTION OF MATAMOROS THAT IS FLOODED FROM RAIN WATER THERE WAS NO EVIDENCE THAT THE RIVER WATER WAS MIXING WITH THE RAIN WATER.

CONSIDERABLE WATER IS PASSING FROM THE RIO GRANDE THROUGH THE SAN RAFAEL CANAL INTO LAKE CULEBRON.

THE RIVER BEGINS TO LEAVE ITS NATURAL BANKS A SHORT DISTANCE BELOW THE SAN RAFAEL CANAL AND THE WEATHER BUREAU'S MERCEDES RIVER GAGE BUT IT IS WELL WITHIN THE LEVEES ON BOTH TEXAS AND MEXICO. THE LEVEES IN THE REACH OF THE RIVER FROM SAN RAFAEL TO ANZALDUAS IS AT A GREATER DISTANCE FROM THE RIVER THAN FROM THIS POINT TO BROWNSVILLE HENCE THE FLOOD WATERS SPREAD OUT MORE. IN PLACES ABOVE ANZALDUAS THE RIVER IS AS MUCH AS A MILE OR A MILE AND HALF IN WIDTH.

A SMALL PORTION OF REYNOSA MEXICO PROBABLY 20 CITY BLOCKS IS FLOODED FROM THE RIVER.

IN THE VICINITY OF RIO GRANDE CITY BUT ON THE MEXICAN SIDE THERE IS CONSIDERABLE FLOODING BUT RIO GRANDE CITY ITSELF IS NOT FLOODED BECAUSE IT IS RATHER HIGH.

ALONG THE SAN JUAN TO CIUDAD CARMAGO AND TO MARTE GOMEZ DAM THERE IS CONSIDERABLE FLOODING FROM THE RIVER. CIUDAD CARMAGO IS PARTLY FLOODED.

CONSIDERABLE WATER CONTINUES TO SPILL OVER MARTE GOMEZ BUT THE PEAK HAS PASSED. THE RIO GRANDE RIVER AT RIO GRANDE CITY IS FALLING SLIGHTLY.

IN SUMMARY THERE IS CONSIDERABLE FLOODING ALONG THE SAN JUAN IN MEXICO FROM MARTE GOMEZ TO RIO GRANDE CITY AND ON THE RIO GRANDE FROM RIO GRANDE CITY TO BELOW THE MERCEDES GAGE. ON THE SAN JUAN AND ALONG THE RIO GRANDE TO JUST ABOVE ANZALDUAS WHERE THE AMERICAN LEVEE STOPS THE RIVER SPREADS CONSIDERABLY IN PLACES. BELOW ANZALDUAS THE RIO GRANDE IS CONTAINED WITHIN THE AMERICAN AND MEXICAN LEVEES EXCEPT WHERE THE MEXICAN LEVEES HAVE BEEN BREACHED.

THE RIVER STAGE AT BROWNSVILLE IS REFLECTING SOMEWHAT THAT DIVERSION OF WATER INTO MEXICO ABOVE MATAMOROS AND THE WEATHER BUREAU BELIEVES THAT THE FORECAST STAGE OF 18.5 FEET AT BROWNSVILLE ON THURSDAY IS QUITE VALID. STAGES BEYOND THURSDAY WILL DEPEND ON JUST HOW MUCH WATER IS EVENTUALLY DIVERTED INTO MEXICO. HOWEVER EVEN HIGHER STAGES THAN 18.5 FEET AT BROWNSVILLE WITH UP TO THE 20 FOOT MAXIMUM INDICATED EARLIER FOR SATURDAY IF DIVERSIONS ARE NOT SUFFICIENT TO CAUSE LOWER STAGES ARE WELL BELOW THE AMERICAN LEVEE AT BROWNSVILLE AND THERE APPEARS TO BE LITTLE DANGER TO BROWNSVILLE. ALL PERSONS LIVING BETWEEN THE LEVEE AND THE RIVER SHOULD EVACUATE AT ONCE.

THE ARROYO COLORADO IS IN FLOOD AS FAR AS BELOW HARLINGEN AND THE MOST CRITICAL SECTION APPEARS TO BE AT THE INTERSECTION WITH US 77 WHERE THE ELKS LODGE AND THE VALLEY MORNING STAR ARE SEVERELY FLOODED. ALSO THE LAUREL PARK SECTION NEARBY IS FLOODED. THIS IS A SECTION OF FINE HOMES.

BICE

RIVER STATEMENT 9 AM CDT WEDNESDAY SEPTEMBER 27, 1967

THE RIO GRANDE RIVER CONTINUES IN FLOOD FROM RIO GRANDE CITY TO BELOW THE MERCEDES GAGE WITH THE CREST NEAR ANZALDUAS.

CONSIDERABLE WATER IS BEING DIVERTED BETWEEN ANZALDUAS AND MATAMOROS BY MEXICO AND THESE DIVERSIONS ARE AFFECTING THE TRAVEL TIME OF THE WATER IN THE RIVER.

THE DIVERSIONS ARE ALSO AFFECTING THE STAGES AS FAR AS BROWNSVILLE AND MATAMOROS BUT THE QUANTITY OF WATER THAT HAS PASSED THROUGH ANZALDUAS HAS BEEN GREATER THAN THAT ON WHICH PREVIOUS FORECASTS WERE BASED. THE RESULT OF WHICH IS THAT THE PREVIOUS FORECAST STAGES FOR MERCEDES AND BROWNSVILLE ARE STILL VALID BUT THEIR TIME OF OCCURRENCE HAS BEEN ALTERED.

THE FOLLOWING STAGES AND TIME OF OCCURRENCE ARE.....

MERCEDES...23.8 FEET THURSDAY AND 24.5 FEET FRIDAY...FLOOD STAGE IS 21 FEET.
BROWNSVILLE...16.5 FEET THURSDAY AND 17.5 FEET FRIDAY...18.5 FEET SATURDAY.

IT STILL APPEARS THAT THE MAXIMUM STAGE AT BROWNSVILLE WILL BE AROUND 20.5 FEET BUT THIS WILL NOT OCCUR UNTIL THE MIDDLE OF NEXT WEEK. FLOOD STAGE ON THE BROWNSVILLE WEATHER BUREAU GAGE IS 18 FEET.

ALL INTERESTS SHOULD TAKE APPROPRIATE PRECAUTIONS FOR THESE PREDICTED STAGES AND ALL PERSONS BETWEEN THE RIVER LEVEES AND THE RIVER SHOULD EVACUATE.

BICE

RIVER STATEMENT 9 AM CDT THURSDAY SEPTEMBER 28, 1967

FROM ALL AVAILABLE INFORMATION THAT THE WEATHER BUREAU IS ABLE TO OBTAIN IT APPEARS THAT THE DIVERSIONS FROM THE RIO GRANDE RIVER WHICH HAVE AND ARE BEING EFFECTED ARE BEING EFFECTIVE IN REDUCING THE FLOOD THREAT TO THE BROWNSVILLE MATAMOROS AREA.

THE RIO GRANDE RIVER AT MERCEDES HAS FALLEN SLIGHTLY DURING THE PAST 24 HOURS AND ALTHOUGH THE CREST ON THE RIVER IS STILL A SHORT DISTANCE BELOW ANZALDUAS IT APPEARS THAT THE DIVERSIONS WILL PREVENT THE RIVER AT MERCEDES FROM RISING FURTHER. THE RIVER THERE CONTINUES A LITTLE MORE THAN A FOOT ABOVE FLOOD STAGE OF 21 FEET.

THE RIVER BELOW MERCEDES WILL CONTINUE TO RISE SLIGHTLY REACHING NEAR FLOOD STAGE OF 18 FEET AT BROWNSVILLE FRIDAY NIGHT OR SATURDAY.

ALL PERSONS LIVING BETWEEN THE RIVER AND THE RIVER LEVEES IN THE BROWNSVILLE AREA IF THEY HAVE NOT EVACUATED SHOULD KEEP CLOSE WATCH ON THE RIVER AND BE PREPARED TO MOVE IF THE RIVER SHOULD RISE SUFFICIENTLY TO FLOOD ANY OR THE AREA BETWEEN THE LEVEES AND THE RIVER.

THE MANY DIVERSIONS ON THE MEXICAN SIDE OF THE RIVER MAKE IT VERY DIFFICULT TO KNOW PRECISELY HOW MUCH WATER IS IN THE RIVER AT ANY GIVEN POINT AND THUS HOW MUCH WILL PASS BROWNSVILLE BUT THE INDICATIONS NOW ARE THAT THE RIVER IN THE BROWNSVILLE MATAMOROS AREA WILL ONLY BE ABOUT BANKFULL.

BICE

RIVER STATEMENT 8:30 AM CDT FRIDAY SEPTEMBER 29, 1967

THE RIO GRANDE RIVER AT BROWNSVILLE IS RISING A LITTLE MORE RAPIDLY THIS MORNING AND WILL CREST TONIGHT AT NEAR FLOOD STAGE OF 18 FEET WEATHER BUREAU GAGE.

PEOPLE LIVING BETWEEN THE RIVER LEVEE AND THE RIVER IN THE BROWNSVILLE MATAMOROS AREA SHOULD WATCH THE RIVER CAREFULLY IN THEIR PARTICULAR LOCATION FOR WATER THAT MIGHT SPILL OVER THE RIVER BANKS AND BE PREPARED TO LEAVE IF THE WATER RISES SUFFICIENTLY.

THE RIVER IS STILL IN FLOOD FROM RIO GRANDE CITY TO BELOW MERCEDES BUT IS FALLING. THE RIVER AT RIO GRANDE CITY SHOULD FALL BELOW FLOOD STAGE OF 21 FEET WEATHER BUREAU DATUM DURING THE NEXT 24 HOURS.

AT MERCEDES THE RIVER WILL CONTINUE IN FLOOD FOR ANOTHER 2 OR 3 DAYS.
